

NEW TelevisNet 3.0

Now you can access any of your refrigeration units in any outlet from anywhere, quicker than you can peel one of these.

Monitoring and controlling your refrigeration units has never been easier thanks to the advanced new web server function that we've incorporated in **TelevisNet 3.0**.

Using any PC or PDA and no additional software, you and any authorised personnel can now access any number of sites simply through a web browser. Anytime. From anywhere. You can check alarm and operation status in real-time and historically. And with all data displayed on screen in easy-to-read tables, it's as fast as peeling prawns and as simple too.

TelevisNet 3.0 is not only a powerful, user-friendly solution, it also ensures that remote supervision and connectivity is now faster, more flexible and more reliable than ever. But that's nothing less than you'd expect from Eliwell – committed to creating innovative, market-leading solutions that ensure you are always in control of the cold chain.
