

Sabroe/ – Get refrigeration right

Packaged ammonia chillers

Sabroe packaged ammonia chillers (PACs) – based on Sabroe compressors – provide notable benefits when indirect cooling using a secondary refrigerant is required.

Because of the advanced technology that Sabroe uses in its PAC chillers, they are so energy-efficient that their low running costs make them the cheapest option over the lifetime of a refrigeration plant. In addition, ammonia – because of its environmental friendliness – is the only suitable refrigerant that will still be in use in the foreseeable future.

The application areas include

- dairies, breweries, wine production
- ice rinks
- process cooling in chemical and pharmaceutical production facilities
- marine applications
- air conditioning
- cold and frozen storage.
